Permeable paving, when used in conjunction with a properly constructed SUDS system offers a range of benefits:

- Allows rainfall to filter through the paved area, without weakening the structural integrity.
- Attenuation of rainfall, allowing it to be gradually absorbed into either the ground or controlled release through outflow pipes.
- Cost effective, when taking into account the absence of pipework, gulleys and inspection chambers, etc.
- Compliance with planning guidance (PPG25) 'Development and flood risks'.
- Improved water amenity achieved as the paving system acts as a filter of pollutants.

Lakeland INGLESTONE

The Permeable Range

Lakeland Inglestone is an **80mm** Permeable Paver which allows water to pass through the paved area and sub base to outflow pipes or infiltration to ground. Suitable for a wide variety of residential, commercial and industrial applications. Planners should be requesting CBPP and other SUDS systems for all types of developments.

Available in **Brindle**, **Charcoal** and **Natural**. Other colours also available, please enquire for further details.

KERBS & CHANNELS

Q KERBS & B KERBS

The Q Kerb (or Quad Kerb)

The Q Kerb is designed to have the necessary edging to support a paved area. It is available in 3 colours - **Brindle, Charcoal** and **Red**. Each pack contains 19.2 linear metres (10 pieces per metre - 192 pieces per pack).

As the name suggests it can be used in 4 ways - **High** or **Low** - **Bullnose** (rounded) or **Chamfered** (bevelled).

It is also possible to make steps from Q Kerbs.

Q Kerb High Bullnose Position

Q Kerb High Chamfered Position

Q Kerb Low Bullnose Position

Q Kerb Low Chamfered Position

Channels

A dished channel is available to remove excess water from a paved or any other area. Available in **Brindle, Charcoal** and **Red**. Each channel is 200mm x 100mm and the channel corners measuring 200mm x 200mm allow a 90° turn.

CORNERS

Q KERBS

The B Kerb (or Bi Kerb)

The B Kerb is designed to have the necessary edging to support a paved area. It is available in 4 colours - **Autumn, Brindle, Charcoal** and **Red**. Each pack contains 28.8 linear metres (10 pieces per metre - 288 pieces per pack).

As the name suggests it can be used in 2 ways - **Bullnose** (rounded) or **Chamfered** (bevelled).

It is also possible to make steps from B and Q Kerbs.

B Kerb Small Internal Bullnose Corner

B Kerb Small External Chamfered Corner

B Kerb Small Internal Chamfered Corner

Rumbled Q and B Kerbs

Also available are the Rumbled Q and B Kerbs to complement our range of Rumbled Pavers.

These are available in **Original, Brindle, Charcoal** and **Red**.

RADIAL KERBS

Radial Kerbs

Radial Kerbs are available to complement the Q Kerbs. These enable the kerb line to follow the contour of the paved area.

Left: *Lakeland* Q Kerbs and Radial Kerbs in Brindle in Bullnose position

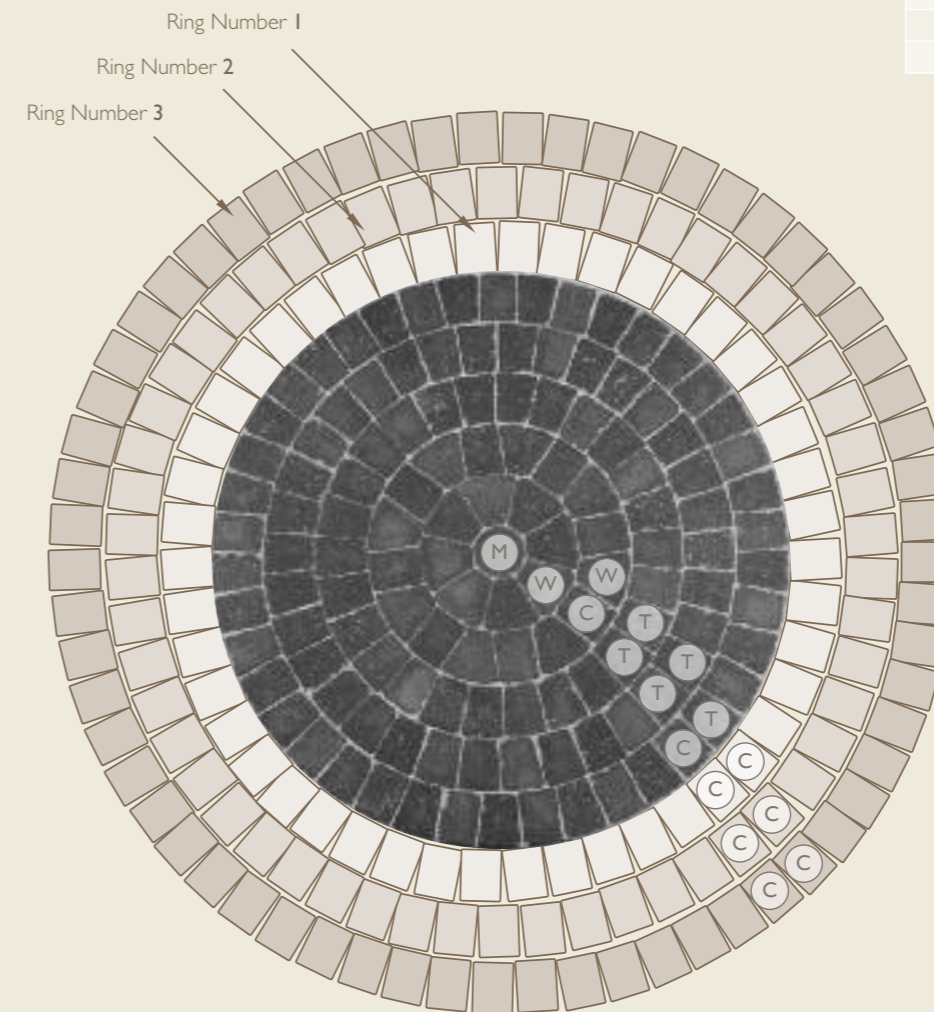

CIRCLES

Lakeland Castlerigg Circle

The *Lakeland* Castlerigg Circle is available either rumbled or unrumbled. Each circle comprises a centre piece and five rows covering an area of 1.89m² with a diameter of 1.55m. If the circle needs to be bigger additional pieces may be purchased on a special order.

Available in **Original, Brindle, Charcoal and Harvest.**

For the above use:
Lakeland Derwentstone®, including
Lakeland Derwentstone® cobble,
Lakeland Kendalstone including
Lakeland Kendalstone cobble.

3 Size 90° Herringbone

For the above use:
Lakeland Derwentstone®, including
Lakeland Derwentstone® cobble,
Lakeland Kendalstone including
Lakeland Kendalstone cobble.

Technical and General Information

Development

Lakeland Pavers is continually developing its range of products and thus the contents of this brochure are subject to change without notice.

Efflorescence

In common with our other concrete products made with a high cement content Lakeland Pavers products may exhibit the temporary surface phenomenon of efflorescence. This may appear as a milky white stain on the face of the product or the appearance of the paver may be such that the colour has faded. This is in no way detrimental to the performance of the product and **responsibility cannot be accepted for its occurrence.**

Colour and Texture Variations

The manufacturing process of concrete products may result in variations in colour and texture which are unavoidable. The amount a product is rumbled may vary from batch to batch and product to product.

To minimise variation it is recommended that products are ordered from the same batch and that products are mixed from at least three different packs where possible. The process of producing Rumbled Products may result in them being covered with a light dust. The dust will naturally weather off, alternatively pressure washing them will have a more instant effect. This should be done prior to filling the joints with dry sand. It is recommended that the appearance be judged by viewing established sites rather than individual samples.

Conditions of Sale

In the unlikely event that the products reach you in a less than satisfactory condition you should notify the retailer immediately. In addition to this, responsibility for costs incurred for uplifting and relaying unsatisfactory products may be prejudiced if, upon reasonable inspection, the defect ought to have been apparent before laying.
